## 2024\_28\_III\_OOPS Using Java Lab

### **REC\_2028\_OOPS using Java\_Week 4\_CY**

Attempt : 1  
Total Mark : 40  
Marks Obtained : 40

#### **Section 1 : Coding**

##### **1. Problem Statement**

In a university library, librarians need to track the usage of special characters in students' notes.

To help them, you are asked to write a program that counts the number of specific symbols in each passage of text.

The symbols of interest are:

Exclamation marks (!) Colons (:) Semicolons (;

##### ***Input Format***

The first line of input contains an integer T, representing the number of test cases (passages).

Each of the next T lines contains a single passage of text.

### ***Output Format***

For each test case, print three integers separated by spaces, representing the number of exclamation marks, colons, and semicolons in the passage.

The first line of output corresponds to the first passage, the second line to the second passage, and so on.

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: 1

Hello! How are you

Output: 1 0 0

### ***Answer***

```
// You are using Java
import java.util.*;

public class Main {
    public static void main(String[] args) {
        Scanner s = new Scanner(System.in);
        int a = s.nextInt();
        s.nextLine();
        for (int j = 0; j < a; j++) {
            String b = s.nextLine();

            int e = 0, c = 0, sc = 0;

            for (int i = 0; i < b.length(); i++) {
                char x = b.charAt(i);

                if (x == '!') {
                    e++;
                } else if (x == ':') {
                    sc++;
                } else if (x == ';') {
                    c++;
                }
            }
        }
    }
}
```

```
        }
    }
}
System.out.println(e + " " + c + " " + sc);
}
}
```

**Status : Correct**

**Marks : 10/10**

## 2. Problem Statement

A bookstore wants to analyze the titles of books to determine their longest word in each title. This helps in designing banners and covers.

Your task is to write a program that, given a sentence (book title), finds and prints the longest word. If multiple words have the same maximum length, print the first one.

### ***Input Format***

The input contains a single line containing a sentence representing the book title.

### ***Output Format***

The output prints a string representing the longest word in the sentence (book title).

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: The Chronicles of Narnia

Output: Chronicles

### ***Answer***

```
// You are using Java
import java.util.*;
```

```
public class Main {  
    public static void main(String[] args) {  
        Scanner s = new Scanner(System.in);  
        String a = s.nextLine();  
  
        String c = "";  
  
        for (String b: a.split(" ")) {  
            if (c.length() < b.length()) {  
                c = b;  
            }  
        }  
  
        System.out.println(c);  
    }  
}
```

**Status : Correct**

**Marks : 10/10**

### 3. Problem Statement

In a college, students are required to create unique usernames for accessing the digital library.

The librarian needs your help to verify whether the usernames entered by students are valid.

A username is considered valid if:

It contains only letters (a–z, A–Z) and digits (0–9). Its length is between 5 and 15 characters (inclusive). It must start with a letter (not a digit).

Your task is to determine whether each username in the list is valid or not.

#### ***Input Format***

The first line of input contains an integer T, representing the number of usernames to check.

The next T lines each contain a string S, representing a username.

#### ***Output Format***

For each username S, the output print "YES" if it is valid.

Otherwise, the output print "NO".

Refer to the sample output for formatting specifications.

### **Sample Test Case**

Input: 1

Alice123

Output: YES

### **Answer**

```
// You are using Java
import java.util.*;
```

```
public class Main {
    public static void main(String[] args) {
        Scanner s = new Scanner(System.in);

        int a = s.nextInt();
        s.nextLine();
        for (int i = 0; i < a; i++) {
            String b = s.nextLine();
            if (b.length() >= 5 && b.length() <= 15 ) {
                if (((b.charAt(0) >= 'a' && b.charAt(0) <= 'z') || (b.charAt(0) >= 'A' &&
b.charAt(0) <= 'Z')) {
                    boolean x = true;
                    for (int j = 0; j < b.length(); j++) {
                        if (!((b.charAt(j) >= '0' && b.charAt(j) <= '9') || (b.charAt(j) >= 'a' &&
b.charAt(j) <= 'z') || (b.charAt(j) >= 'A' && b.charAt(j) <= 'Z'))) {
                            x = false;
                            break;
                        }
                    }
                    if (x) {
                        System.out.println("YES");
                        continue;
                    }
                }
            }
        }
    }
}
```

```
        }  
    }  
    System.out.println("NO");  
}  
}  
}
```

**Status : Correct**

**Marks : 10/10**

#### 4. Problem Statement

Riya is preparing for a vocabulary test. Her teacher told her to focus on long words in her practice sentences, specifically words that have at least 5 letters.

Riya wants to write a program that will help her identify such words quickly.

Your task is to help Riya by printing all the words in a given sentence that have a length greater than or equal to 5.

If no such word exists, display "No long words found".

##### ***Input Format***

The input contains a single line containing a sentence with multiple words.

##### ***Output Format***

The output prints all words having length  $\geq 5$ , separated by a space.

If no such word is found, print "No long words found".

Refer to the sample output for formatting specifications.

##### ***Sample Test Case***

Input: The quick brown fox jumps over the lazy dog

Output: quick brown jumps

### **Answer**

```
// You are using Java
import java.util.*;

public class Main {
    public static void main(String[] args) {
        Scanner s = new Scanner(System.in);
        String a = s.nextLine();
        int i = 0;
        for (String b: a.split(" ")) {
            if (b.length() >= 5) {
                i++;
                System.out.print(b+" ");
            }
        }
        if (i == 0) {
            System.out.println("No long words found");
        }
    }
}
```

**Status : Correct**

**Marks : 10/10**
